

Swiss operator

in&phone is to be the Swiss mobile network of choice for non-licensed mobile service providers, and will provide its own mobile services to customers in high potential segments, including international travellers, SMEs and enterprises.

Unify Group Holding

in&phone is member of Unify Group Holding (UGH) a Dutch based company that delivers mobile services made for travellers, business people and companies with an international profile. Working under the brand names Unify Mobile and in&phone UGH delivers wholesale mobile subscriptions with cross border and international functions.

Unify Mobile was founded in 2004 to become a full MVNO with second and third tier Mobile Network Operators. Full MVNO means handling its own HLR, SIMs, and indoor coverage with mobile PBX and fixed mobile integration. The goal was to link different mobile networks into one virtual network across borders offering services as if one was still in the home network (ease of use, mobile VPN and other VAS) as well as a reduction in costs.

UGH, based in the Netherlands, is an innovative Mobile Virtual Network Enabler (MVNE) company, which has developed a number of cross border patented tech-

nologies, enabling new business models to address major opportunities in the mobile industry. These technologies enable customer friendly, cost effective seamless international solutions to be provided to the user.

In January 2008 UGH acquired a majority stake in in&phone as this company fitted the full MVNO model, and also offered an opportunity to establish a Mobile Network Operator.

In & Phone

in&phone was incorporated on October 8, 2003. In 2003, the Federal Commission for Communication (ComCom) awarded a GSM licence to in&phone. This GSM-1800 licence allows the company to build a mobile operator business and provide nationwide mobile telecommunication services. From mid-2006, the Company has been fully operational for voice and SMS services. In the course of 2009, the company implemented a new network and is also offering data services.
